### Flight Report: (example)

Arrived on scene to find a home requiring filming. The broker for remax has left instructions from the work order to film "the four corners of the home and a center shot above the house as well as a fly in from the community entrance to the front door".

V/o has cordoned off the launch space as I the PIC have begun making sure that no people are present for the flight and that the area is secure.

We are using a DJI phantom for this filming and will proceed with an automated drone deploy filming first for a 3d model followed by the specified shots followed by the fly in to the door.

The 3d model drone deploy went without incident and the data was uploaded to the cloud for processing. The corner images and center shot were performed without incident. The visual observer noticed a bird beginning to fly near the drone however it flew away, no incident occurred. The V/o Has begun driving the vehicle with me piloting the drone about ten feet in front of the vehicle and about 30 feet up within the field of view of the VO. We drove to the home front door filming without incident. All data has been stored onto the drives for processing and the drone has landed safely without incident. PIC Lynch has given a work invoice to Remax broker smith and was given a check in the amount of \$500 for the shoot for address 1234 woodlake drive sugar land Texas. We are returning to base now. End of report.
